SAP Business One Partners Dedication

Dear SAP Business One Partners,

The success of SAP Business One has never been about technology alone. It has always been about you, the extraordinary partner community that brings this solution to life. Your ambition, your ingenuity, and your relentless drive to innovate have shaped not only the past, but the future of what's possible.

This book is dedicated to you.

Across the globe, SAP Business One partners are redefining innovation through powerful AI solutions, turning bold ideas into real-world impact. The stories captured here are proof of what happens when vision meets execution, and collaboration meets courage.

And this is only the beginning. We are excited to continue this AI journey together, with you and your customers, creating, transforming, and documenting many more success stories along the way.

Thank you for inspiring what comes next.

Missing your AI innovation for SAP Business One?

AGENTIC AI

Agentic AI for SAP Business One

Agentall is **purpose-built** agentic AI for SAP Business One, empowering our customers with digital workers to **maximize efficiency and optimize performance**.

Powered by a dedicated **agentic AI layer**, Agentall eliminates manual work through intelligent, agent-driven **automation**. It transforms analytics by enabling users to ask questions in **natural language** and instantly receive real-time reports and dashboards—turning insights into action and making manual report creation obsolete. With an embedded AI copilot as the sole user interface, interacting with business systems becomes as simple as having a conversation.

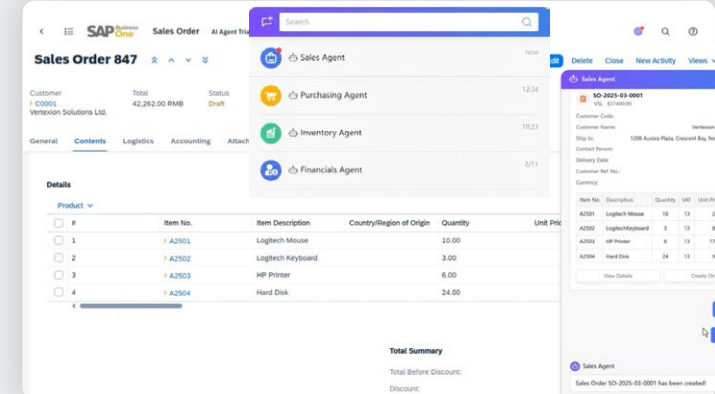

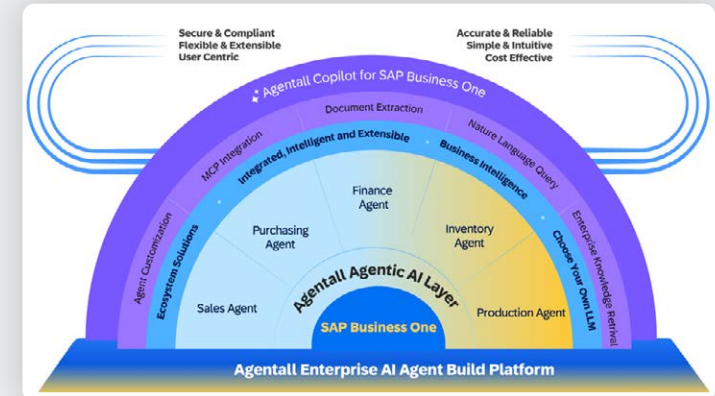

Seamlessly integrated into both the **SAP Business One Classic and Web Clients**, Agentall is built with enterprise-grade trust at its core. By inheriting SAP Business One's **role-based** authorizations and data access controls, it delivers the power of AI with built-in security, compliance, and data privacy.

“ The interface is clean and it’s easy to use. The time it will save end users of SAP Business One looks substantial. I think that any business owner looking to improve productivity and remove tedious processes from their staff will see instant value. Plus, the potential of using the power of AI to give insights to data that until this point remained hidden in their database.

Irwin Padrique, CEO, Ark One Solutions Inc.

b1direct AI

b1direct AI is an intelligent assistant module which revolutionizes data processing within SAP Business One. Powered by advanced AI technology, it enables faster access to critical business information through natural language search experience. Providing not only access to data but also linking it together to yield new insights.

One or more assistant agents can be quickly created online in b1direct AI interface without extensive programming knowledge. The AI agents can be configured to align with business processes, creating a tailored automation solution that addresses unique operational challenges.

By securely leveraging data from the SAP Business One database, the b1direct AI module enables organizations to:

- Streamline access to SAP Business One data through intelligent search;
- Filter out redundant information and summarize relevant insights to support informed decision-making;

- Reduce manual effort and repetitive tasks, increasing productivity and empowering employees to focus on meaningful work.

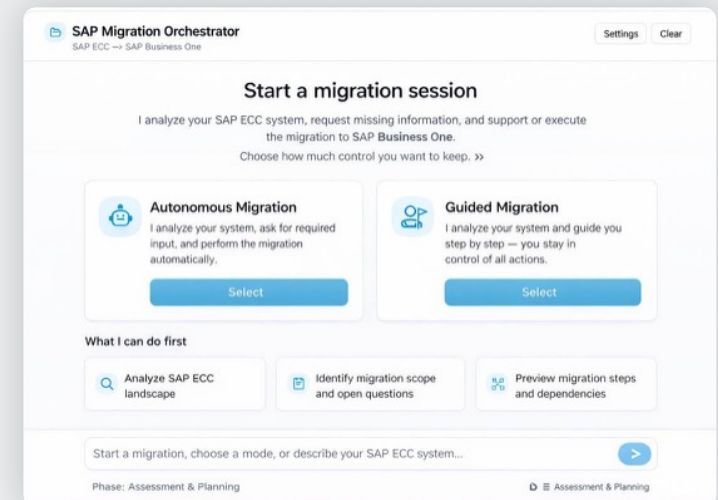

“ The tedious creation of Excel spreadsheets is a thing of the past. Using b1direct AI, we can search SAP Business One data instantly, access precise and relevant information, and significantly improve efficiency across our operations.

ClouDiax AXeLANT

AXeLANT transforms the way businesses work with SAP Business One.

Instead of navigating through menus, communicate directly with your ERP –in natural language, via chat.

Intelligent AI agents handle recurring processes autonomously: invoice processing, order management, data maintenance – around the clock. You remain in control. Human-in-the-loop ensures approvals for critical actions.

A complete audit trail provides full transparency.

The open architecture enables integration with additional systems – email, ticketing, third-party applications. AXeLANT becomes the central

intelligence layer of your IT landscape, with company knowledge available to all processes.

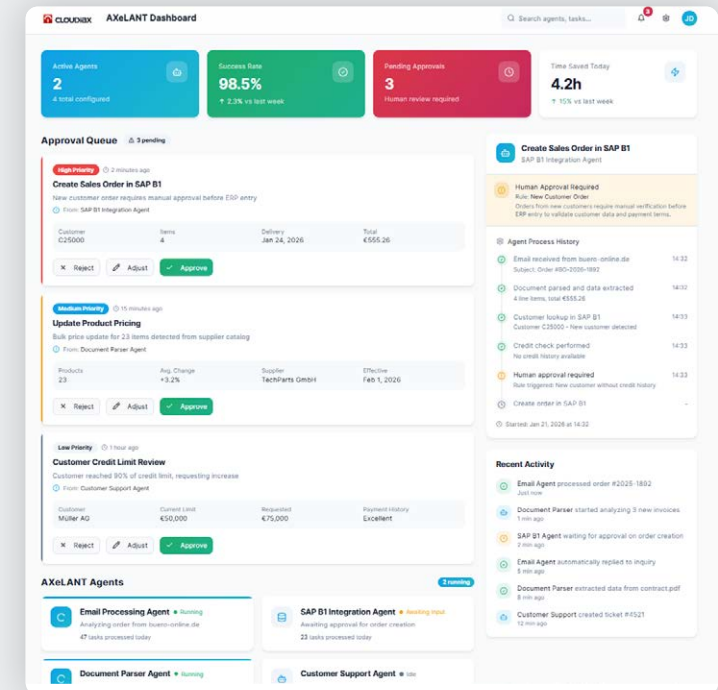

AXeLANT is the first step into a new era of ERP usage: Fewer clicks. More value creation. Full control.

“ We’re not just adding AI to SAP Business One – we’re fundamentally changing how businesses interact with their ERP.

Dirk Cyrener, CEO & Member of the Executive Board ClouDiax AG

CompuTec AppEngine MCP Server

The CompuTec AppEngine MCP Server enables AI to act as an intelligent partner inside SAP Business One and CompuTec solutions. By connecting Agents like Claude directly to your company database, users can retrieve data and execute multi-step workflows using natural language. This ensures contextual accuracy, reduces manual tasks.

- **Direct Integration:** Connects Agents such as Claude, Cursor, or Copilot to SAP Business One and CompuTec Solution data.
- **Action-Oriented:** Automatically creates documents and executes workflows.
- **Universal Access:** Works seamlessly across both SAP Business One Desktop and Web Clients.
- **Customizable:** Build customer and industry-specific tools and prompts.
- **Value:** More accurate operations with reduced manual data entry.

“ By creating a standardized bridge between AI and SAP Business One as well as CompuTec solutions, we’ve eliminated the need for custom connectors, allowing our partners to deploy intelligent, Generative AI solutions instantly.

Martin Gore, Head of Strategy & Partner Transformation, CompuTec

ERPure.AI for SAP Business One

ERPure.AI brings practical, purpose-built agentic AI to **SAP Business One**, helping SMEs eliminate the daily grind of manual ERP work without ripping and replacing what they already use. Its pre-trained AI agents plug into familiar tools like **Microsoft Teams and Outlook**, so users can ask questions, trigger actions, and get work done in natural language—without coding or complex setup. The result is faster processing, fewer errors, and more time back for your team to focus on customers and growth.

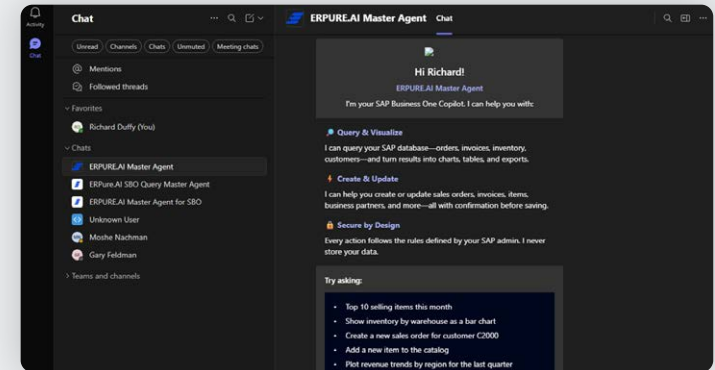

With dedicated agents for **Accounts Payable, Sales Processing, Expense Management, and conversational ERP support**, ERPure.AI automates high-volume workflows such as invoice capture from email, purchase order conversion, expense approvals, and record creation—while keeping controls in place through permissions, approvals, and an auditable trail of actions. If you want to modernize SAP Business One operations quickly and reliably, ERPure.AI delivers a clear path to measurable efficiency gains and a smoother experience for every user who touches the ERP.

“ The interface is clean and it’s easy to use. The time it will save end users of SAP Business One looks substantial. I think that any business owner looking to improve productivity and remove tedious processes from their staff will see instant value. Plus, the potential of using the power of AI to give insights to data that until this point remained hidden in their database.

Agentic AI for SAP Business One

Where ERP Meets AI That Actually Does the Work.

Most AI tools help you think. MyWave helps you stop doing the work you shouldn't have to do anymore.

MyWave brings real, do-work AI Agents to SAP Business One. Agents that don't just analyze or recommend, but execute entire business processes end-to-end, safely and under control. Built for how SAP Business One really runs, MyWave recognizes that customers don't operate in a single system; they rely on a connected network of applications.

MyWave runs natively on SAP BTP or within the Service Layer of SAP Business One, orchestrating work across any system of record, SAP or non-SAP, without copying data or breaking governance. MyWave Agents handle tasks from start to finish. You assign a task; the Agent completes it. You only step in when human judgment is required. This isn't automation, it's delegated execution, governed by design and trusted by enterprise.

For partners, MyWave turns expertise into scalable, repeatable outcomes:

- Build once, deploy many times
- Create Agents without deep technical skills
- Package industry knowledge as reusable components
- Deliver measurable value in weeks, not months

With 50+ ready-to-deploy Agents and growing, MyWave executes — safely, intelligently, and for real.

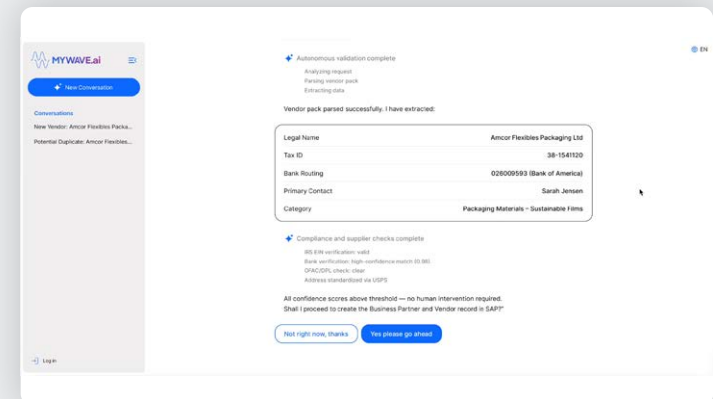

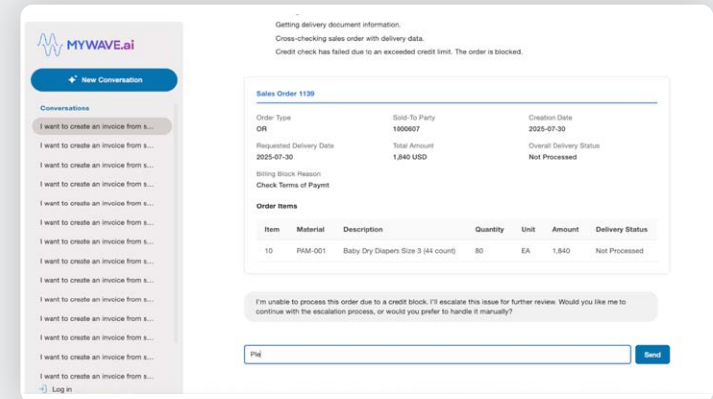

“ MyWave has operationalized a mature, model-driven agentic framework... purpose-built for real-world enterprise complexity. It delivers reliable, autonomous agents that orchestrate across fragmented systems—without requiring perfect data or pristine APIs.

Mickey North Rizza, Group Vice-President,
IDC Enterprise Software

B1UP AI Assistant

The **B1UP AI Assistant** from Boyum IT Solutions is an AI-powered extension of the award-winning **B1 Usability Package**, designed to help SAP Business One users make faster & smarter decisions. It delivers **context-aware insights** and **guided assistance** without requiring configuration or sharing business data externally. Built as a scalable platform capability, the AI Assistant is designed to expand over time, with support for additional Boyum IT products.

Users simply ask questions in their native language, such as checking delayed orders, identifying aging inventory, or detecting master data issues and receive **clear, actionable answers instantly**, without navigating complex screens or reports.

Key Benefits Across Roles:

- **Customer Service:** Instantly retrieve order status during calls for faster responses.
- **Inventory Management:** Identify slow-moving or aging stock to reduce waste.

- **Production Management:** Gain visibility into bottlenecks and late production orders.
- **Data Quality:** Detect duplicates and inconsistencies for clean master data.
- The key benefits across roles are just examples. Your imagination is the limit.

Your fastest path to SAP Business One insights - no setup, no complexity, just answers.

“ With the B1UP AI Assistant Boyum is bringing B1UP to the next level.

Markus Weiner, Head of SAP Sales, Neumeier AG

AI Assistant Beta

How can I implement line search in B1UP?

To implement line search in B1UP (B1 Usability Package), follow these steps:

1. **Enable Line Search:** By default, line search is applied to all predefined forms. If you want it to apply only to specific forms, you need to adjust the settings.
2. **Choose Form Types:** Click on the button next to the checkbox (for enabling line search) to specify which form types you want the line search to be active for.
3. **Define Additional Search Columns:** By default, certain columns are available for search. If you want to include additional columns, provide a comma-separated string containing the column IDs of the additional search columns. Note that you can only add extra search columns for item lines in documents, not for the pick and pack manager.
4. **For UDOs:** If you're working with User-Defined Objects (UDO), ensure that normal line search is enabled. Line search on UDOs will search in all columns displayed in the matrix.

For further details, you can refer to the official B1UP documentation:

- [Use Line Search](#)
- [Use Line Search on UDO](#)

Sources

- Use Line Search: <https://manual.boyum-it.com/B1UP/uselinesearch.html>
- Use Line Search on UDO: <https://manual.boyum-it.com/B1UP/use-line-search-on-udo.html>

Candis

With Candis, you can **automate your invoice receipt** and centralize all your digital invoices in one place – in the cloud. Here they are **processed with AI**: automatically read out, **pre-accounted** and checked for **duplicates**. Is everything correct? Then it's off to your **individual approval process**. Candis also offers a complete **travel management** solution and **corporate credit cards**. The whole process is fully **integrated with SAP Business One** to create a seamless experience.

AI features support B1 customers in invoice management precisely where processes have previously taken up an unnecessary amount of time.

- AI-supported data extraction
- Invoice verification via AI (German §14 UStG + § 33 UStDV)
- AI generated posting text
- Pre-accounting for service invoices through AI suggestions

“ Before Candis, it took us 40 days to close the month. With Candis, we can do it in days!

Marcel Sroczynski, Managing Director,
21Dx GmbH

[Back to Content](#)

Candis GmbH | Germany
candis.io

The screenshot displays the Candis software interface. On the left, a 'WÜRTH' invoice is visible. On the right, a 'New Document' form is shown with the following details:

- Document Type: Invoice receipt
- Goods Invoice (selected) / Services
- Business Partner: Würth Deutschland GmbH
- Vendor Account: 810014445
- Gross Amount: 90,49€
- Order Number: 2023-005-SE

In the foreground, a '3-Way-Match' table is displayed, comparing quantities from a Purchase Order, Goods Receipt, and New Invoice:

Description	Purchase Order	Goods Receipt	New Invoice
Screws	200	200	200
Nuts	400	400	400
Washers	300	100	300

The 'Washers' row shows a discrepancy, with a yellow warning triangle and the number '100' indicating a difference between the Goods Receipt and the New Invoice.

TellMe - AI Cash Management

TellMe is an AI-powered treasury and accounting engine that seamlessly integrates with SAP Business One to automate complex financial workflows. The solution uses machine learning to automate over 90% of accounting entries by identifying, completing, and posting bank transactions automatically. Key AI capabilities include:

- **Intelligent Transaction Categorisation:** Automatically tags transactions based on context, eliminating manual data entry
- **Smart Bank Reconciliation:** Automatically matches bank statements with open invoices in SAP B1 using AI to identify discrepancies and suggest reconciliations
- **Predictive Late Payment Alerts:** Analyses historical patterns to predict which customers or suppliers might pay late before it happens

- **Advanced Cash Flow Forecasting:** Uses behavioural data to anticipate liquidity needs and propose proactive funding actions
- **Automated Intercompany Reconciliation:** Detects and reconciles debt and balances across group entries without spreadsheets

“ Previously, 100% of one team member’s time was spent on manual tasks. Today, with Embat, one person can manage daily treasury in real time, spending only 10–15% of their time on it — freeing up resource for value-added work

Javier Gayá, CFO, HOFF

BatchFlow Invoice workflow

BatchFlow is an Invoice Workflow solution with a strong focus on the supply chain, including order and purchase matching.

The solution features a unique integration with SAP Business One, is developed by FutureLink, and is distributed through partners.

BatchFlow stands out through its advanced AI based scanning, achieving a 98.9% recognition accuracy on both expense invoices and goods invoices with complex line items.

With BatchFlow AI, there is no manual handling of incoming PDF invoices received via email. The solution also supports e-invoicing in both local and international formats, including Peppol.

AI can further be used for automatic posting and coding of goods invoices, by enriching line-item data via an AI bot such as ChatGPT.

For purchase matching, BatchFlow uses a lightweight and efficient machine learning-based AI solution, enabling fast and highly accurate processing of goods invoices against purchase orders.

BatchFlow's target market includes both SMEs and Enterprise customers.

“ The Business Perspective and Flexibility We Need.

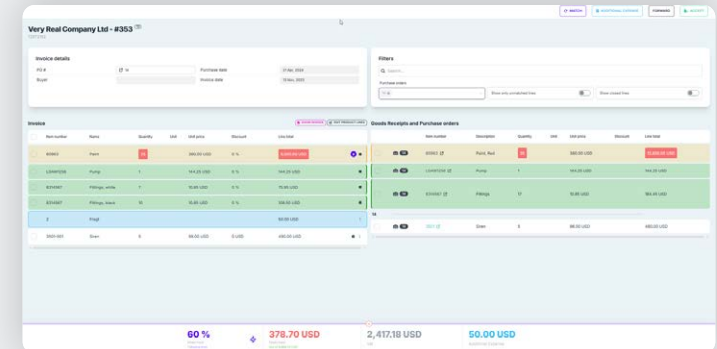

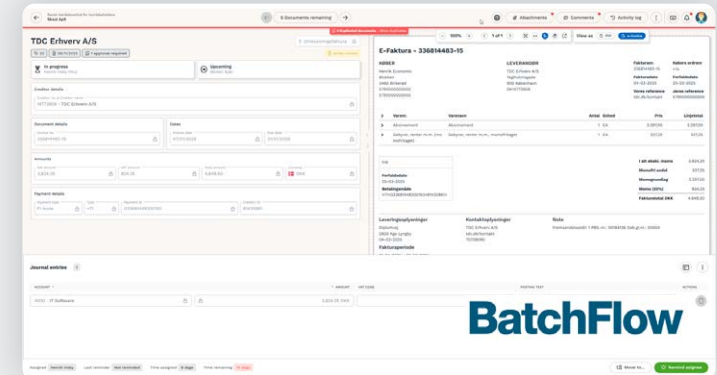

Michelle Boejer, Managing Director, Suprabeam

AI Solutions for SAP Business One

Our AI engine is tightly integrated with SAP Business One, enabling intelligent automation and advanced analytics for organizations.

AI-Powered OCR Automation

Automated Procure-to-Pay (P2P) and Order-to-Cash (O2C) using OCR to capture data from invoices, purchase orders, and delivery documents, eliminating manual entry

AI Chatbot

A human-like AI chatbot for SAP Business One that delivers instant insights, forecasts, and reports through simple chat anytime, anywhere, on any device

Intelligent Bank Integration

Seamless bank connectivity with SAP Business One for automated payments, real-time reconciliation, and secure financial data exchange

OEE, Predictive Quality Control & Monitoring

AI-driven OEE, predictive QC, energy optimisation, and condition-based monitoring to reduce defects, downtime, and operational risk in manufacturing environments.

“ At IMTS Solutions, we aim to empower SME businesses with innovative and tailored Digital Transformation solutions

SAP Business One AI: JINI SmartDoc

JINI stands for “Journalising Intelligent Numeric Interface”, our AI-based framework for smart automated data processing.

The framework recognises various document types, extracts and enriches the content and processes it in a strictly structured form. The output of the automation can be further processed directly by machine.

Use cases: Document analysis, account assignment, automation of production processes, data enrichment.

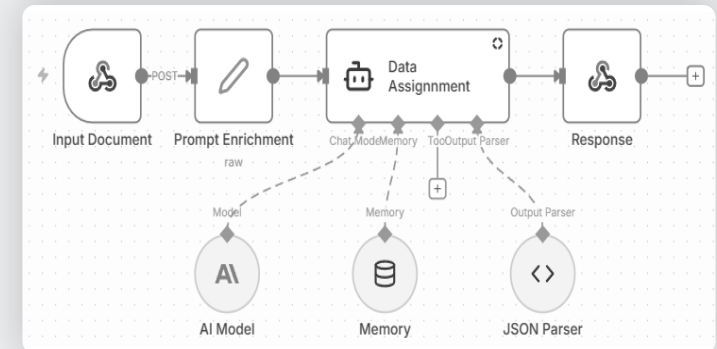

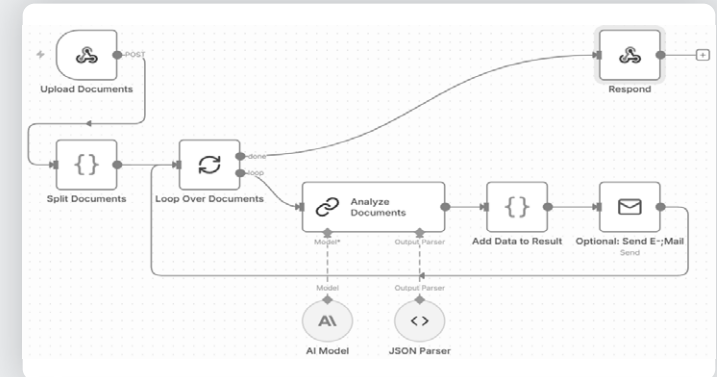

Classification: Structural support software at service level, supports Clean Core. Data storage locally or in the private cloud, compliant with EU AI Act and GDPR.

“ Our AI-supported document recognition in SAP Business One identifies and posts documents with near-perfect accuracy and full tax compliance. This marks an important milestone on our path toward fully AI-driven financial processes.

Bettina Tausch, Head of Financial Accounting, Inceptum

CoreSync

Speed up triage. Simplify escalation. Reduce alert fatigue.

CoreSync is an intelligence layer for SAP Business One support operations. It is designed to reduce queue delays by identifying routine issues early and accelerating the escalation of complex cases, so expert resources spend time resolving real problems, not sorting tickets.

It streamlines partner support in three ways:

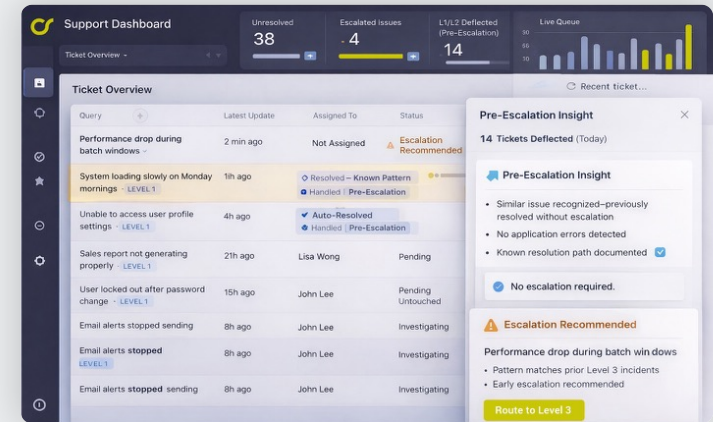

- **Support Triage:** Identifies recurring Level 1 and Level 2 issue patterns early, allowing routine issues to be resolved or deflected before they enter extended support queues.
- **Escalation Management:** Flags potential Level 3 issues sooner and routes them directly to the appropriate human specialists, reducing delays caused by manual review and reclassification.
- **Queue Efficiency:** Improves overall support throughput by reducing nuisance tickets and freeing up bandwidth for higher-complexity investigations.

[Back to Content](#)

CoreSync isn't a chatbot or automation tool. It works quietly behind the scenes to route tickets smarter and help partners focus their expertise where it matters most.

“ By reducing unnecessary queue friction, partners can focus their expertise where it has the greatest impact.

Farm4all SIG

Farm4all Farm4all® SIG is a georeferenced data management platform that allows real-time access to agricultural, livestock, and cotton data. By combining farm maps with operational records, the platform provides a clear and structured view of farm activities and performance.

Through real-time integration with SAP Business One, AI continuously analyzes data and transforms complex information into clear, actionable insights. Instead of navigating reports and dashboards, users can interact with the data through an intelligent chat interface that understands questions in natural language and responds instantly with relevant information.

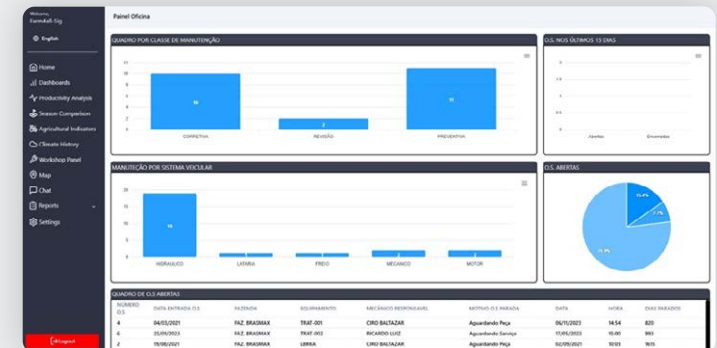

This solution is designed to improve visibility, understanding, and decision-making. Executives and farm managers can quickly identify trends, risks, and opportunities, supported by up-to-date SAP data, without technical complexity.

“ The decision for SAP Business One was an important one for the Group. So, here we say that SAP is a high-value product and not expensive. We have a great relationship with Liberali, which serves us very well commercially and technically...”
Grão de Ouro Group.

Logiks Copilot

The secure AI layer for SAP Business One

Logiks Copilot is an AI assistant that connects SAP Business One with your surrounding systems, documents, and intelligent agents - bringing everything into one secure, unified experience. It enables organizations to introduce AI into daily operations in a structured, governed, and scalable way.

Key benefits

- **Faster decisions** with trusted answers from live SAP Business One data
- **Higher productivity** through natural-language access for business users
- **Better alignment** by connecting ERP data with knowledge sources and tools
- **Controlled AI adoption** with security, governance, and model flexibility

What you can do with Logiks Copilot

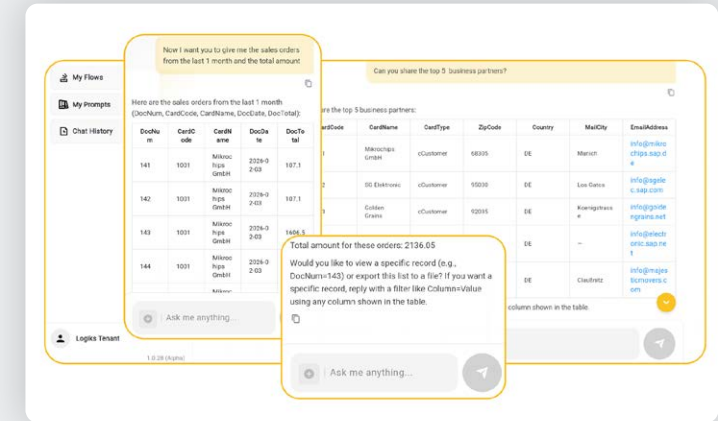

- Ask questions in natural language (e.g., “Who are our top 5 Business Partners?”)
- Receive live data directly from SAP Business One
- Connect SAP Business One with other systems and knowledge sources
- Integrate multi modal AI agents into one unified interface
- Choose the AI model that fits your requirements

“ Enterprise AI works best when it augments what’s already in place. Logiks Copilot brings a secure, user-friendly AI layer to SAP Business One and beyond.

morrai Analytic AI Assistant For SAP Business One

InsightsFlow - for Insights ActionFlow – Plan, Analyse, Advise, Act

6 Pains - Outcomes

ERP data exists but answers take days

- Instant answers in seconds from live SAP Business One data

Heavy dependency on reports, Excel, and analysts

- Zero reporting. Just ask and get clear narratives

Dashboards overwhelm, not guide decisions

- Story-based insights tailored to each role

Leaders don't know what action to take next

- AI-generated recommendations and action plans

Late detection of performance issues

- Early alerts with root-cause explanations

ERP adoption is low outside finance teams

- Plain-language access for sales, ops, and leaders

“ We've built an Analytics AI Assistant directly on top of SAP Business One—for Sales, Purchase, Stock, and Finance—that cuts MIS and analytics time by 80%. Executives no longer wait for reports; they ask in plain English and get instant, actionable clarity from their live ERP data.

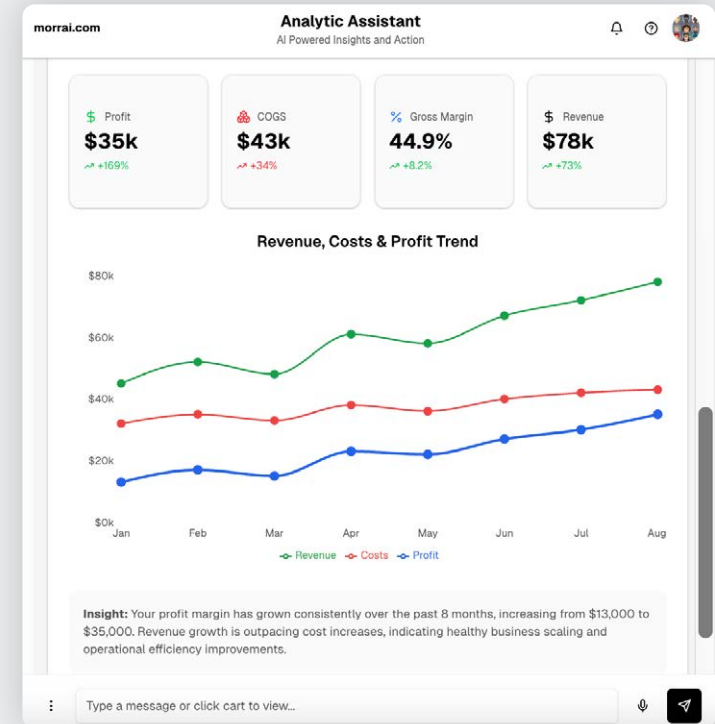

Krishna, Product Evangelist

Automated AI-guided E-Invoice import for SAP Business One

Import e-invoices into SAP Business One effortlessly via drag and drop using the nAG Automation Platform. AI-driven matching logic reduces manual effort, improves accuracy and accelerates invoice processing.

Increase productivity through AI:

- Automatic selection of business partners and items based on matching logic
- Intelligent determination of the best possible matches in case of inaccuracies
- Fallback to predefined business partners or items when no suitable match is found
- Original e-invoice is attached to the newly created document in SAP Business One

“Automate your ERP processes. Let AI handle the invoice mapping”

Simon Berleb, Head of Development, neumeier AG

Automated AI-guided e-invoice import for SAP Business One

Description
Automation for the import of electronic invoices. An e-invoice gets transferred via Filedrop as XRechnung or ZUGFeRD. The automation identifies the format and creates a draft invoice in SAP Business One and attaches the original file under attachments.

Identification of business partners and items through AI-embedding

1. Clear result with sufficient distance from the next business partner / item.
2. If there is no clear result after step 1., the AI selects the best match by comparing the 3 highest scores.
3. If step 2. also fails to produce a clear result, a predefined fallback value will be selected.

AI innovation, out of the box — powered by IBM Cognos Analytics & IBM Planning Analytics

QuickStart for SAP Business One adds **conversational analytics** and **intelligent planning**, so teams move from question to decision in minutes. Deterministic, non-generative AI runs securely in your environment.

Use the **IBM Cognos Analytics AI Assistant** to ask questions in natural language, get instant answers, auto-build visuals & dashboards, and let the system surface insights automatically—no technical expertise required.

Plan faster in **IBM Planning Analytics** by leveraging AI-powered forecasting, natural language insights, anomaly detection, and what-if scenarios to automate planning workflows and drive smarter, faster decision-making.

Business Impact

- Reduce time-to-insight with conversational analytics
- Empower non-technical users to self-serve
- Improve planning agility with AI-powered simulations
- Enhance decisions with automated, explainable insights

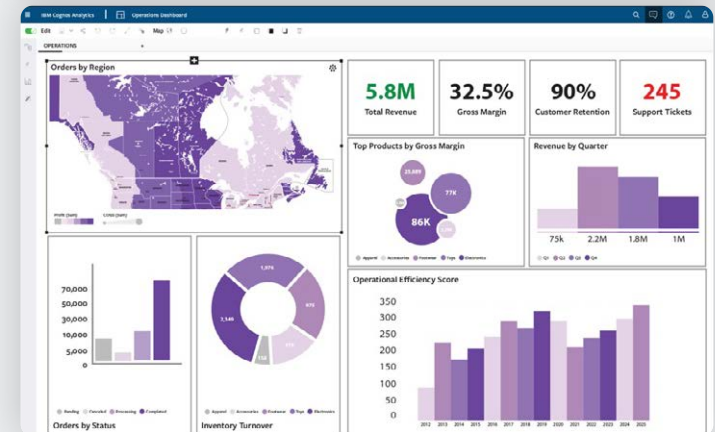

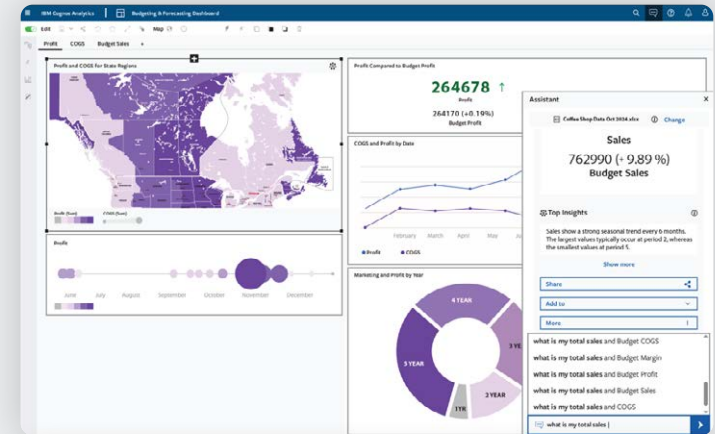

“ QuickStart helps us to be much nimbler in our response to market changes.

The QuickStart Solution

SMART Docs

Smart Docs is an intelligent document automation solution for SAP Business One that digitizes, reads, verifies and routes incoming invoices while seamlessly connecting document data with your ERP workflows.

Increase efficiency, transparency and data quality with a smart solution that:

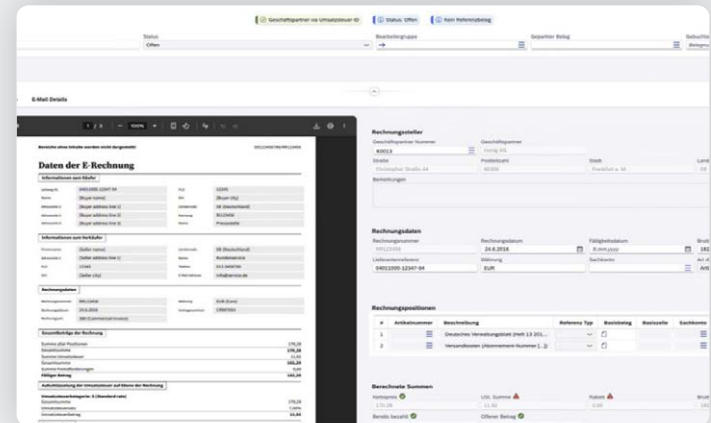

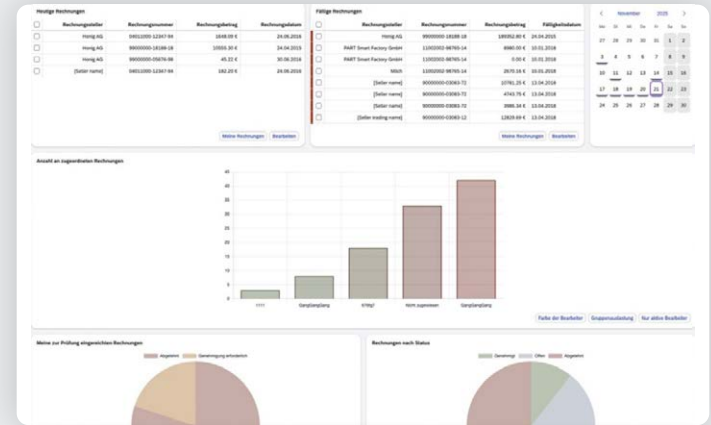

- Automatically captures invoices from email, network folders and paper
- Reads documents using OCR and AI-supported document recognition
- Verifies and structures invoice data before posting
- Routes invoices through configurable approval workflows
- Integrates directly into SAP Business One
- Archives documents electronically via DMS Hub with audit-proof linkage
- Enables fast research from SAP Business One or EASY DMS

“ Saving thousands of hours with Smart Docs – companies automate invoice processing in SAP Business One and speed up approvals Grão de Ouro Group.

EssentialONE.AI

by SEIDOR

EssentialOne.AI (E1.AI): The Next Frontier of AI-Driven Management for SAP Business One

EssentialOne.AI is the definitive solution for companies looking to modernize their operations without the complexity of heavy infrastructure. More than just a web portal, E1.AI is a productivity ecosystem that bridges the power of SAP Business One with the agility of Generative Artificial Intelligence.

Why E1.AI is a Game-Changer for Your Business:

“Zero Footprint” Implementation: Unlike traditional solutions, E1.AI requires no add-ons installed within SAP Business One. Integration is handled seamlessly via the Service Layer, ensuring your ERP remains “clean,” stable, and easy to upgrade.

The E1.AI Intelligent Agent: Revolutionize how your team works. Through an integrated AI Agent, users can execute purchase orders, check stock levels, or manage financial approval workflows simply by chatting. It's ERP efficiency at the speed of conversation.

Scalable AWS Serverless Architecture: Built on AWS Serverless technology, E1.AI is designed for high scalability. Whether you have 10 or 1,000 users, the solution automatically adapts to

[Back to Content](#)

your demand, ensuring peak performance and maximum uptime without the overhead of fixed server costs.

Native SAP Experience on BTP: Developed on the SAP Business Technology Platform (BTP), we deliver the trusted security and visual identity of SAP combined with the mobility and sleekness of a modern web application.

Key Business Benefits:

Cost Reduction: Minimize manual task time and eliminate local infrastructure maintenance costs for your web portal.

Total Mobility: Access sales, procurement, and inventory from anywhere, without the need for complex VPNs.

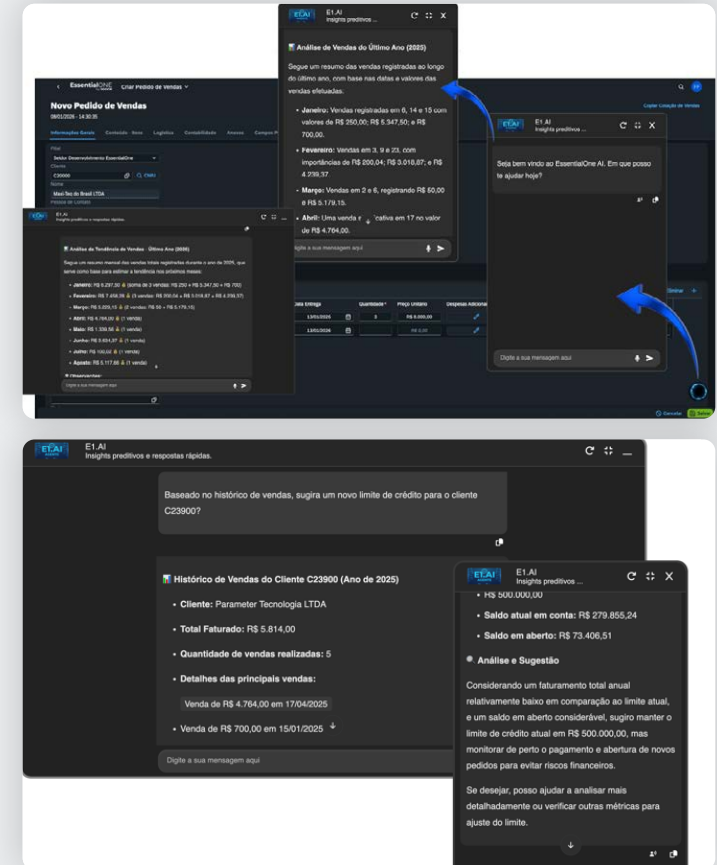

Instant Adoption: The intuitive interface and AI Agent support virtually eliminate the learning curve, empowering your team to be productive from day one.

“ EssentialOne.AI isn't just a query tool; it is your SAP Business One supercharged by AI, running on the world's most secure cloud and ready to scale with your business without installing a single line of code on your local server.

IA Vero - AI Assistant for SAP Business One

IA Vero is an intelligent AI assistant that transforms how businesses interact with SAP Business One. By connecting directly to client servers, users can access critical information, generate documents, and validate data through simple conversations no technical knowledge required. Available on both WhatsApp and Web platforms, IA Vero delivers enterprise intelligence anytime, anywhere.

- Reduce operational time and costs through intelligent automation
- Generate charts, tables, and reports instantly from SAP data
- Execute complex queries using natural language conversations
- Create professional documents and summaries automatically
- Validate information across servers in real-time

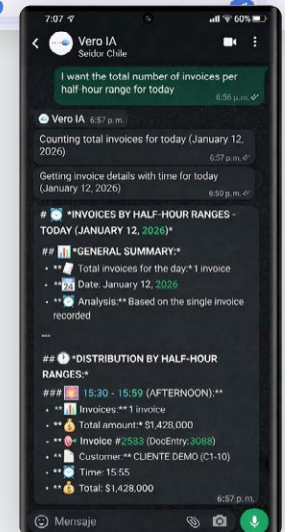

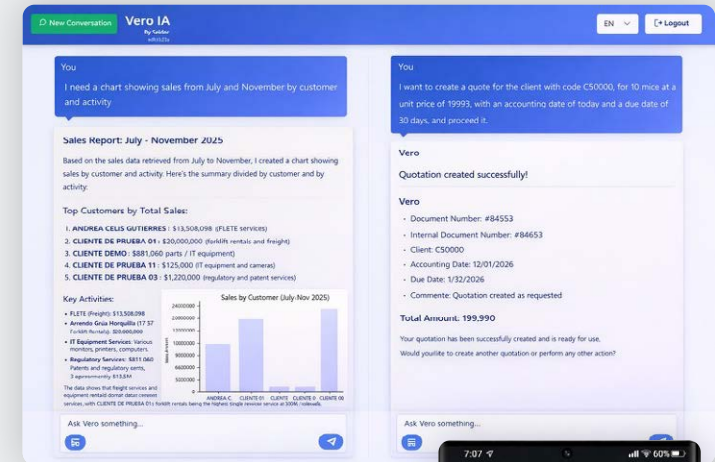

“ IA VERO lets you interact with SAP Business One using natural language in real-time.

XpenseOne - AI-Powered Expense Management

Conversational handling of expenses – via Whatsapp

- Request & approve advance payments
- Register expenses (AI scanning & data retrieval)
- Create, submit & approve travel expense reports

AI-driven user interaction

- Intuitive, human-like conversations
- Minimal training required
- Android app also available for all modules
-

Native integration with SAP Business One

- Bot manages interactions with application's APIs
- Creates **Payment Wizard Orders** for approved advanced payments
- Creates **Journal Vouchers / Journal Entries** for expense reports
- Generates **AP Invoices** and directly posts expenses

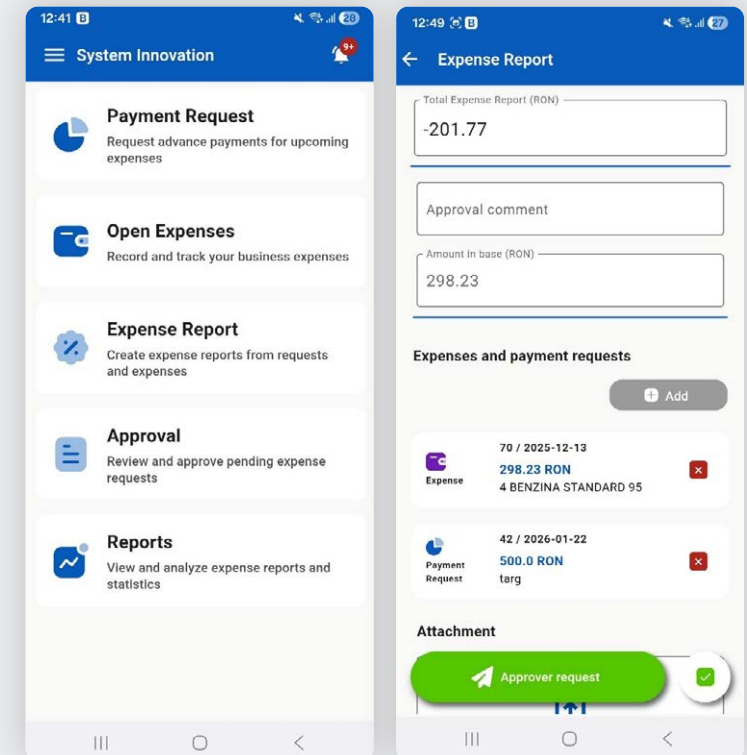

“ Our focus was not AI for AI's sake, but AI that simplifies real ERP expense processes — from document capture to SAP Business One, and adds value to our customer base.

AI-Driven Accounts Payable & Risk Management Platform

Traild is an AI-powered Accounts Payable solution that unlocks efficient and secure invoice-to-pay processes for SAP Business One customers through a two-way, real-time integration.

Traild leverages AI in two practical, high-impact ways:

- AI-enabled invoice processing using machine learning to accurately capture, classify and code invoices at the line level, automate PO matching, and streamline approvals, eliminating manual data entry and paper-based AP workflows
- Always-on anomaly detection that continuously learns normal business and supplier behavior, identifying errors, unusual activity and potential fraud before payments are made

This approach delivers tangible value for SAP Business One customers:

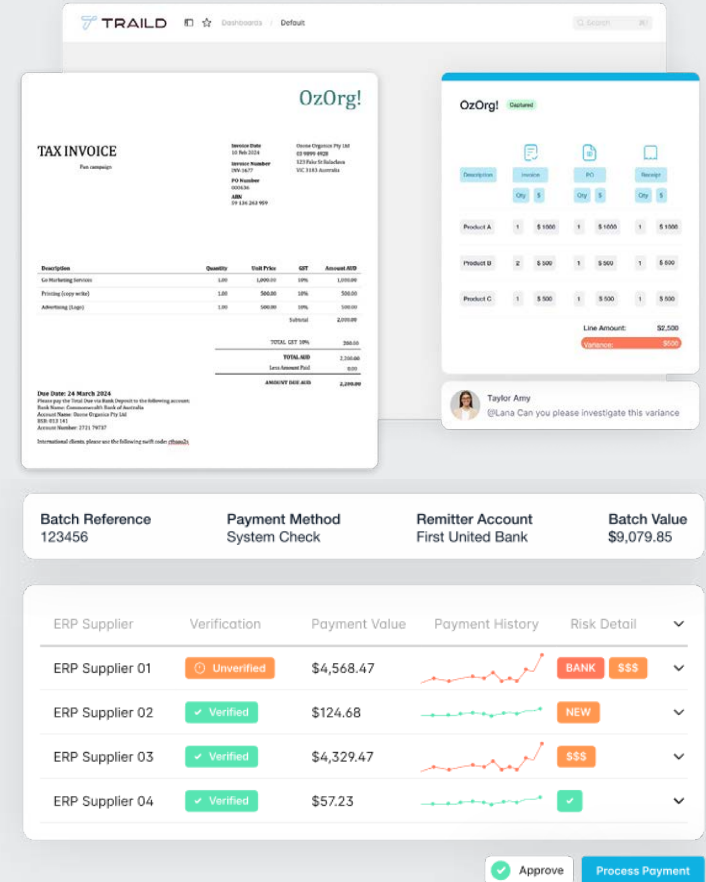

- Faster, more scalable AP operations
- Stronger financial control without added complexity
- Reduced risk of errors, duplicate payments and fraud

“ The value of Traild has been phenomenal. We’ve dramatically reduced the effort required to run accounts payable, improved accuracy and governance, and given the business far better visibility and control.

UniAIDoc

Automated processing of incoming documents.

Incoming emails - such as requests for quotations, orders, delivery notifications, incoming invoices or order confirmations from suppliers - are automatically retrieved from a defined mailbox.

AI recognises relevant information, such as the associated customer or supplier and the items from the email text or a PDF attachment, and processes the data directly in SAP Business One.

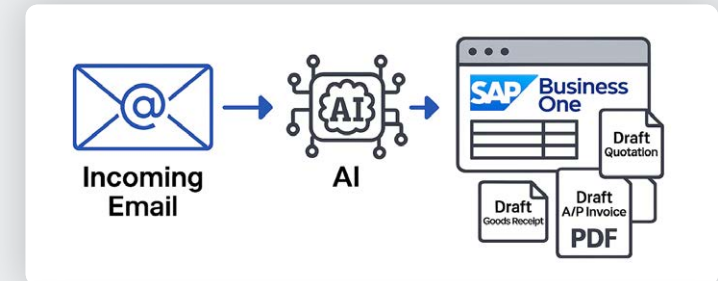

This allows automatically draft documents of the above-mentioned document types or comparisons with supplier orders to be created, while the original email with attachments is stored as an attachment to the draft document in the SAP system. This saves time, reduces manual entries and minimises errors.

“ Intelligent document recognition that takes your SAP process to the next level.

Stephan Putro, Head of Business Unit, Unirez

EIDO is an AI-powered solution designed to bring intelligent document understanding into SAP Business One.

It extends the ERP with advanced capabilities for recognizing, classifying and processing core business documents across A/P and A/R processes.

Built on a modular AI Core Framework, **EIDO** combines document intelligence with process orchestration, enabling companies to automate document-driven activities such as order handling, goods receipt and invoice processing.

The solution integrates seamlessly with SAP Business One, preserving standard workflows while enhancing data quality, efficiency and operational visibility.

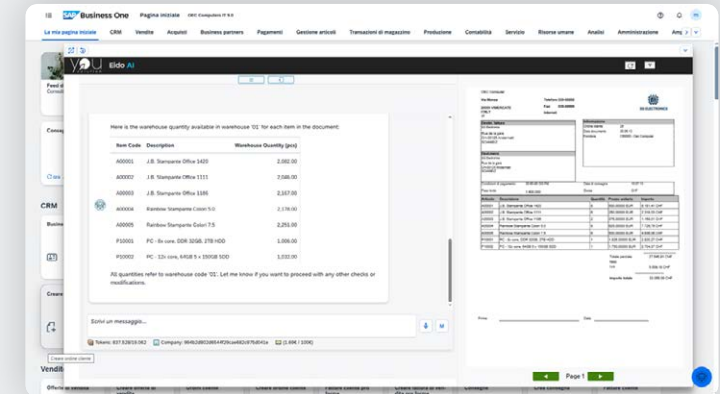

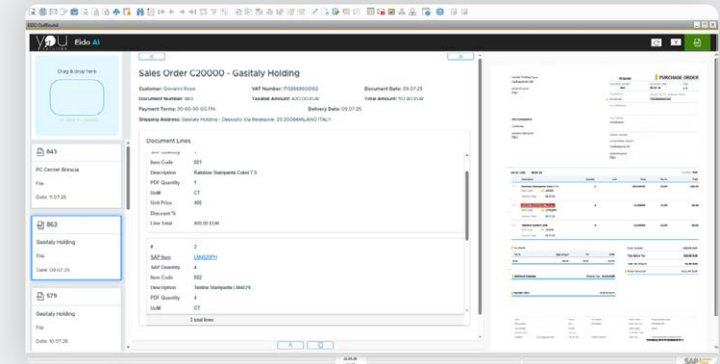

EIDO is designed to support a progressive adoption of artificial intelligence, allowing organizations to introduce AI into their daily ERP operations in a controlled and scalable way.

“ EIDO was designed to make AI tangible and actionable for SAP Business One users. By focusing on real operational documents and processes, we enable companies to benefit from artificial intelligence in a pragmatic way, without adding complexity to their ERP landscape.

Document processing automation with ROSSUM

Rossum is specialised AI platform for Intelligent Document Processing (IDP) that automates processing of marketing documents such as A/P invoices, Sales orders, Purchase orders confirmations, etc. using advanced AI technology stack based on machine learning and LLMs for data extraction and matching with high accuracy.

The integration between Rossum platform and SAP Business One is based on loosely coupled concept using Service Layer API with possibilities to enhance the integration according to customer specific customisations in SAP Business One.

Use AI to streamline accounting and finance operations by:

- Automatically recognizes document structure without the need for templates
- Extracts headers, items, prices, quantities, VAT rates, and additional costs with high accuracy

- Loosely coupled integration using Service Layer API, no need to instal any add-on
- It works with SAP Business One vanilla, no initial modifications to the standard are required
- Fast and continuous learning is increasing the overall accuracy over time
- Handles processing of high volumes of documents without increasing the manpower

Result:

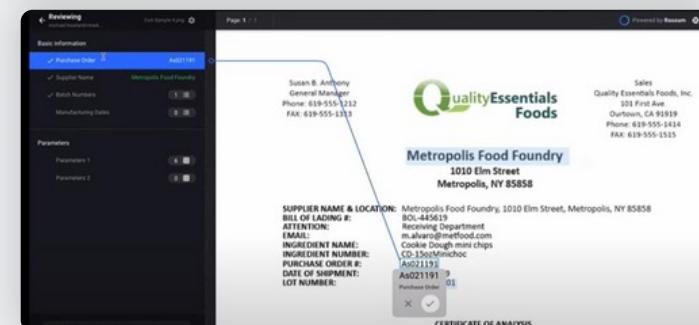

Up to 75% faster document processing.

“ Rossum made us change our perspective on document processing in the company.
